Field service management system

Audience: Dispatchers, technicians, office staff, supervisors, and managers.

How to use this guide: Each module has its own chapter. Within a chapter you'll find what each tab does, step-by-step instructions for common tasks, and a reference of on-screen fields and status codes.

Overview

ServiceNet is a field service management system — a single workspace for running the full life of a service job, from the moment a customer requests work through scheduling, dispatch, the on-site visit, quality review, and final sign-off. Almost everything in the application is organized around that journey, so it helps to picture the whole flow before focusing on any one screen.

Two ways into the system

Most of this manual describes the staff workspace — the screen with the dark navigation rail down the left edge. Each entry on that rail opens a module (Dashboard, Service Accounts, Service Schedule, Service Ops, Assurance, Financial, Inventory, Service & Parts, Reports, Notification, and Configuration), and modules open as tabs across the top of the work area, so you can keep several open and switch between them.

The second entry point is the Customer Portal, a public “Request Service” page where customers book work themselves in four short steps. Their submissions arrive in the Service Request tab of Service Schedule, where staff review each one and convert it into a real appointment. The portal has its own chapter later in this guide.

The dashboard at a glance

When you sign in, the Dashboard is your command center. Its Overview tab summarizes the business: a breakdown of active accounts by type, revenue over the last few months, and headline figures such as revenue this month, pending requests, and active accounts.

Dashboard — Overview tab.

The Operations tab shifts the focus to live work. It highlights recent exceptions (for example cancelled and unable jobs), the open pipeline grouped by stage, and operational counts such as open jobs, low-stock parts, and flagged jobs.

*Dashboard — Operations tab.*

The Dashboard also carries My Day, Schedule, and Financial tabs, which narrow the same information down to the day's work, an upcoming-schedule view, and financial figures.

The appointment lifecycle

The backbone of ServiceNet is the appointment lifecycle. Every job carries a status, and the actions available on it — the buttons you see and the tab it appears under — depend on that status. Once the flow makes sense, the rest of the system is far easier to follow.

In the normal path, a job is created — either booked directly in Service Schedule or converted from a customer request — and becomes Scheduled, then Confirmed. From Service Ops it is Dispatched to a technician, moves to In Progress while the work is carried out, and reaches Pending Review once the technician submits their results. A reviewer marks it Finished, after which it passes to Assurance for a final check and is signed off as Completed.

Jobs do not always run straight through. A technician may report a No Show or be Unable to complete the visit; those land in the Wrap Up tab of Service Ops, where they can be Rescheduled or Cancelled. Assurance can also send a finished job back by requesting a reschedule. The diagram below shows the full set of statuses and the paths between them.

The appointment lifecycle and its statuses. The Schedule chapter lists each status in detail.

Where to go next

The chapters that follow take each module in turn, starting with Getting Started and the elements common to every screen. Reading them in order roughly mirrors the lifecycle above; to find a specific task, use the Contents list to jump straight to it.

1. Getting Started

ServiceNet organizes the life of a service appointment from the moment it is scheduled until it is completed and invoiced. Work flows through these areas, reachable from the menu and the top-bar search:

- **Account** — register and maintain customer accounts and their service locations.
- **Schedule** — create and confirm appointments, assign technicians, build estimates, manage technicians and their availability, and review customer service requests.
- **Customer Portal** — a public page where customers request service themselves; their requests arrive in Schedule's Service Request tab.
- **Service Ops** — dispatch confirmed jobs, track work in progress, handle reschedules, and wrap up jobs that didn't complete.
- **Assurance** — review finished jobs, resolve issues, and sign off completed work.
- **Financial** — post completed jobs to the ledger, receive payments, track receivables and aging, and make adjustments.
- **Inventory** — manage parts stock, receiving, issues, adjustments, vendor returns, and service usage.
- **Service & Parts** — maintain the catalog of services, service items, parts, promotions, and vendors.
- **Reports** — operational and financial reports across the system.
- **Notifications** — your inbox of system alerts, the delivery log, and per-type preferences.
- **Search & Activity** — the top-bar search opens any customer's full Activity page (history, process, photos) from anywhere.
- **Configuration** — system administration: sites, roles, permissions, the page registry, and user accounts (admins only).

Common screen elements

Most list screens share the same layout, so once you learn one tab the rest feel familiar:

Element	What it does
Search box	Type part of a name, number, account, or location to filter the list. Click the round search button (or press Enter) to apply.
Site selector	Limits the list to one site. You only ever see sites you have access to.
Filters	Drop-downs and date pickers that narrow the list (for example status, type, or a date range).
Refresh	Reloads the list using the filters you currently have selected, picking up changes other users have made.
Excel	Downloads the current, filtered view as a spreadsheet file.
Records count	Shows how many rows match your current filters.

Element	What it does
Pager	Moves between pages when a list is long.

Permissions

Buttons and actions appear based on your role. If you don't see a button described in this manual (for example Delete or Confirm), your account may not have that permission. Contact your administrator if you believe you need access.

Your profile and signing out

Your account menu sits at the bottom-left of every screen, on your name. Click it to open **My Profile** or to **Log Out**.

The account menu (bottom-left).

My Profile opens a dialog where you can update your first, middle, and last name, your email, and your phone, and change your password. Click **Save** to apply your changes.

The image shows a 'My Profile' dialog box with a dark header. The header contains a circular logo with 'DK' and the text 'My Profile' and 'Update your personal information'. Below the header, there are five text input fields: 'FIRST NAME' (Dennis), 'MIDDLE NAME' (W.), 'LAST NAME' (Kaufman), 'EMAIL' (kimhcc6@yahoo.com), and 'PHONE' ((212) 555-0009). At the bottom, there are three buttons: 'Change Password', 'Cancel', and 'Save'.

The My Profile dialog.

2. Account Module

The Account module is the customer management hub. Use it to register, view, and maintain customer accounts and their service locations. It has two tabs: Setup — a search sidebar on the left for finding accounts paired with an editor panel on the right for the selected one (sections 2.1–2.5) — and Accounts, a sortable, paginated table of every account with quick inline editing (section 2.6).

2.1 Finding an account

Type in the search box at the top of the left sidebar — it matches on **account name, account number, first name, or last name**. Results appear automatically after a short pause (no need to press Enter) as cards showing the account name, number, a type chip, and a status dot. Click a card to load the full account in the editor; the selected account stays highlighted in the list. Clearing the box returns to the “Type to search” hint.

2.2 Adding a new account

1. Click **+ New Account** in the top-left toolbar.
2. Fill in the dialog — **Account Name, Type, First Name, Last Name, and Site** are required; middle name, email, and phone are optional.
3. Click **Register**. ServiceNet auto-generates a unique account number and immediately loads the new account in the editor, ready for further detail.

The screenshot shows the 'New Account' dialog box overlaid on the 'Setup' tab of the ServiceNet interface. The dialog has a title bar with a close button. Below the title, it says 'Fill in the details to register a new account.' The form contains the following fields:

- ACCOUNT NAME ***: A text input field with the placeholder 'Company or account name'.
- TYPE ***: A dropdown menu with 'Commercial' selected.
- FIRST NAME ***: A text input field with the placeholder 'First name'.
- LAST NAME ***: A text input field with the placeholder 'Last name'.
- MIDDLE NAME**: A text input field with the placeholder 'Middle name'.
- SITE ***: A dropdown menu with '-- No Site --' selected.
- EMAIL**: A text input field with the placeholder 'Email address'.
- PHONE**: A text input field with the placeholder 'Phone number'.

At the bottom of the dialog are two buttons: 'Cancel' and 'Register' (highlighted in green). The background shows a list of accounts on the left and a detailed view of the 'Bridgepoint Water Utility' account on the right.

Adding a new account.

The **Account Number** is generated automatically and can't be edited; every other field can be changed later in the editor.

2.3 Editing an account

The editor is divided into four sections: Account Identity (core fields), Mailing Address, Billing Address, and Service Locations. The header shows the account name, number, type, status, and location count, along with the unsaved-changes badge and the Delete, Review & Save, and Discard buttons.

The account editor.

The Review & Save workflow

As you edit, changed fields are highlighted and an **unsaved changes** badge appears, activating **Review & Save**. Clicking it opens a review dialog that lists every changed field with its old and new value side by side. Click **Confirm & Save** to apply, or **Cancel** to keep editing. To abandon edits entirely, click **Discard** — this reloads fresh data from the server rather than just undoing in memory.

Billing address

The billing section has a **Same as mailing address** toggle. When it's on, billing fields are hidden and the account is stored as billing-equals-mailing; when off, the billing fields appear pre-filled from the mailing address for you to edit. With the toggle on, billing fields are left out of the Review & Save diff entirely — only fields that would actually change are shown.

2.4 Managing service locations

Each account can have one or more **service locations** — the physical sites where work is performed, kept separate from the account's mailing and billing addresses. Location add, edit, and delete take effect **immediately** when saved; they do not go through Review & Save.

Adding, editing, and deleting a location

1. In the **Service Locations** section, click **+ Add Location**.
2. Fill in the dialog — **Location Name** is required; the rest (Primary toggle, contact name/phone, address, route, and notes) are optional.
3. Click **Save**. The location card appears right away. To change one later, click **Edit** on its card; to remove it, open Edit and click **Delete**, then confirm.

Each location card shows the name (with a **Primary** badge if marked), the combined address, and the on-site contact. Deleting a location is permanent — make sure no active appointments are tied to it first.

2.5 Deleting an account

With an account loaded, click **Delete Account** in the editor header and confirm. This permanently removes the account **and all of its service locations**; it cannot be undone. Ensure there are no active appointments or open service orders for the account before deleting.

2.6 Accounts tab

The Accounts tab is a fast, table-style alternative to the Setup tab's sidebar-and-editor layout. Where Setup is built for working one account at a time in depth, the Accounts tab is built for browsing many accounts at once and making quick edits without leaving the list.

The toolbar across the top combines a **search box** (matching account name, number, contact name, email, or phone), a **Refresh** button, an **All Sites** filter, and an **All Status** filter, with a running account count on the right. The list only ever shows accounts at the sites you have access to; the site filter narrows further within those.

The grid lists each account's number, name, type, site, primary contact, phone, and status, paged fifteen at a time with page controls at the foot of the table. Each row ends with an **Edit** button.

Clicking **Edit** opens a self-contained dialog — separate from the Setup editor — with the account's Identity, Mailing Address, and Billing Address fields (the billing section has the same **Same as mailing** toggle as Setup). Account Name and Site are required. Click **Save Changes** to write the record and refresh the list, or **Cancel** to close without saving. Unlike Setup, this dialog saves directly — there is no Review & Save diff step — and it does not manage service locations, which remain on the Setup tab. The Edit button appears only for staff who hold the edit permission; everyone else can still browse and search.

The Accounts tab — browse, filter, and quick-edit.

2.7 Permissions

Permission	What it controls
Account.Setup.AddAccount	The + New Account button.
Account.Setup.ReviewSave	Review & Save and Discard for account field changes.
Account.Setup.ManageLocations	+ Add Location and the Edit button on location cards.
Account.Setup.DeleteAccount	The Delete Account button in the editor header.
Account.Account.EditAccount	The Edit button on the Accounts tab and saving from its quick-edit dialog.

3. Schedule Module

The Schedule module is the home for appointments and the people who carry them out. It has five tabs: Work Schedule (a calendar overview), Assignment (book and edit appointments), Technician (manage your techs and their weekly hours), Technician TimeOff (per-date availability exceptions), and Service Request (review requests submitted by customers and turn them into appointments). Every tab carries an All Sites filter at the top, so you can focus on a single location's work and staff or view them all at once.

3.1 Work Schedule tab

Work Schedule is a calendar view of all booked work. Switch between **Month** and **Week** with the toggle, and move through time with the arrows or the **Today** button. Each day shows its appointments and an availability badge giving both how many technicians are free and the total number of open job slots that day (for example, 27 avail : 162), so you can see capacity at a glance. Clicking a day opens its Available Technicians list, where each technician is shown with their dispatch number, that day's booked appointments (or, if none, their scheduled hours), and a count of jobs booked against their daily limit; clicking an appointment opens a quick popup. Managers can also add **Blackout** dates (holidays or closures) that remove a day from booking; the Add Blackout dialog uses a calendar date picker, with a recurrence option for one-time, weekly, or annual closures.

The screenshot shows the ServiceNet Work Schedule interface. On the left is a dark sidebar with navigation links: Dashboard, Service Accounts, Service Schedule (selected), Service Ops, Assurance, Inventory, Service & Parts, Reports, Notification, and Configuration. The main area has a header with 'Service Schedule' and tabs for Work Schedule, Assignment, Technician, Technician TimeOff, and Service Request. Below the tabs is a calendar for June 2026, with a toggle for Month/Week and a 'Today' button. The calendar grid shows days from Sunday to Thursday. Each day has an availability badge (e.g., '28 avail'). A popup for the date 2026-06-03 is open, showing appointment details for 'Atlas Property Management' and 'Clearwater Pool Services', including location, time, and technician information.

Work Schedule — Month view with an appointment popup.

Work Schedule — Week view, with the Blackout control.

3.2 Assignment tab

The Assignment tab lists appointments with their date, time, site, account, location, assigned technician(s), and status. From here you can search, add a new appointment, or open an existing one to edit.

The screenshot shows the ServiceNet interface with the 'Service Schedule' tab selected. The left sidebar contains navigation options like Dashboard, Service Accounts, Service Schedule, Service Ops, Assurance, Inventory, Service & Parts, Reports, Notification, and Configuration. The main area displays a table of appointments with the following data:

APPT NO	DATE	TIME	SITE	ACCOUNT	LOCATION	TECH(S)	STATUS
2026-6	06/10/2026	8:45 AM – 9:15 AM	Southeast Field Office	Coastal Air Systems	Main Office	R.Allen	Pending Review
2026-5	06/03/2026	11:30 AM – 1:30 PM	Headquarters	Stonegate Church	Main Office	J.White	Unable
2026-1	06/03/2026	7:15 AM – 8:45 AM	Headquarters	Atlas Property Management	East Branch	T.Moore	Cancelled
2026-3	06/03/2026	7:00 AM – 8:30 AM	Southeast Field Office	Clearwater Pool Services	Main Office	R.Allen	Scheduled
2026-2	06/03/2026	6:45 AM – 7:45 AM	Headquarters	Atlas Property Management	East Branch	J.Mitchell	Finished

At the bottom of the screen, it shows '1 – 5 of 5' and a page number '1'.

The Assignment tab.

Booking a new appointment

1. Click **Add Appointment** (top-right of the toolbar).
2. In the **Account** box, search by name, number, address, phone, or email and pick the customer.
3. Choose the **Location** for that account (the primary location is marked with a star).
4. Set the **Date** and **Start Time**. The end time is calculated for you from the services added.
5. Pick the **Technician** who will perform the work. The list is limited to technicians who are available on the chosen date — anyone on time off or with no scheduled hours that day is left out — and it refreshes automatically if you change the date. (When editing an existing appointment, the technician already assigned stays selectable even if they are no longer available, so the booking is never silently cleared.)
6. Click **+ Add Service** to add one or more services to the appointment.
7. Optionally add **Internal Notes** (visible to the technician) and **Customer Notes** (included in customer emails).
8. Click **Set Appointment** to save. The new appointment appears in the list with status **Scheduled**.

Editing an appointment

Click **Edit** on any row. The same form opens with the account and location shown as read-only labels. You can adjust the date, time, technician, services, and notes, then click **Update**.

Appointment. The status drop-down lets you see the current stage; later stages are managed from Service Ops and Assurance.

Edit Appointment

ESTIMATE / DRAFT INVOICE

Buttons: Delete, Cancel, Update Appointment

Editing an appointment.

Estimates and confirming

While editing, the **Estimate / Draft Invoice** section lets you build a priced estimate with services, parts, and discounts. When an estimate is confirmed it becomes the basis for the job. A confirmed appointment shows a **Confirmed** badge; opening it then shows a read-only view with **View** and **Print** options rather than the editing footer.

3.3 Technician tab

The Technician tab is the directory of your field staff. Search by name, number, or dispatch ID, and toggle **Active only** to hide inactive techs. Click **Add Tech** or any row to open the editor, where you set basic details (name, phones, email, dispatch number, status), assign **Skills** and **Sites**, and define a **Weekly Default Schedule**.

The screenshot shows the ServiceNet interface with the 'Service Schedule' tab selected. The 'Technician' sub-tab is active, displaying a list of technicians. The left sidebar contains navigation options: Dashboard, Service Accounts, Service Schedule (selected), Service Ops, Assurance, Inventory, Service & Parts, Reports, Notification, and Configuration. The top right of the interface shows a search icon, a user icon, and a help icon. Below the tabs, there is a search bar for technician names or dispatch numbers, a filter for 'Active only' (checked), and a count of '28 records'. A '+ Add Tech' button is also present. The table lists technicians with their IDs, names, dispatch numbers, emails, work phones, and status (all 'Active'). Each row has an 'Edit' button. The bottom of the page shows the user 'Dennis Kaufman' and a pagination bar for '1 - 10 of 28' records.

	Daniel					

The Technician tab.

The weekly schedule is the heart of availability: for each day you set the working hours and a **Max Count** (how many jobs that tech can take that day), and tick which days are active. This recurring pattern is what the booking calendar and the customer portal use to work out open capacity.

Technician editor — details, skills, and assigned sites.

The screenshot shows the 'Edit Technician' dialog box. It has a title bar with a close button (X). Below the title bar, there are three tabs: 'SITES', 'SCHEDULE', and 'TIME OFF'. The 'SITES' tab is selected. Under the 'ASSIGNED SITES' section, there are several buttons: 'Headquarters', 'East Regional Office' (highlighted in red), 'West Regional Office', 'Central Warehouse', 'Southeast Field Office', 'Midwest Office', 'Northwest Field Office' (highlighted in red), 'South Warehouse', and 'Remote Support Hub' (highlighted in red). Below this, the 'WEEKLY DEFAULT SCHEDULE' section shows a table with columns for the day of the week, start time, end time, and a checkbox. The table is as follows:

Day	Start Time	End Time	Limit	Checkbox
Sun	8:00 AM	5:00 PM	6	☐
Mon	8:00 AM	5:00 PM	6	☒
Tue	8:00 AM	5:00 PM	5	☐
Wed	8:00 AM	5:00 PM	6	☒
Thu	8:00 AM	5:00 PM	6	☒
Fri	8:00 AM	5:00 PM	6	☒
Sat	8:00 AM	5:00 PM	6	☐

At the bottom of the dialog, there are three buttons: 'Delete' (red), 'Cancel' (yellow), and 'Save Tech' (black).

Technician editor — assigned sites and weekly default schedule.

3.4 Technician TimeOff tab

Technician TimeOff records **exceptions** to the weekly schedule on specific dates. Use it when a tech is off for a day, or available with different hours or a different job limit than usual. In the Edit Time Off dialog, setting Max Appointments to zero marks the date as a full day off and the start and end times are ignored; any positive number overrides their normal capacity just for that day. These per-date exceptions take priority over the weekly default everywhere availability is calculated. If the technician already has appointments booked on that date, ServiceNet won't let you save a change that drops their limit below what's already booked (including a full day off) — reassign or move those appointments first.

The Technician TimeOff tab.

The screenshot shows a modal window titled 'Edit Time Off' with a close button (X) in the top right corner. The form contains the following fields: 'TECHNICIAN *' with a dropdown menu showing 'Heather Adams'; 'DATE *' with a date input field showing '06/05/2026' and a calendar icon; 'MAX APPOINTMENTS *' with a numeric input field showing '2'; 'START TIME' with a time dropdown menu showing '8:00 AM'; and 'END TIME' with a time dropdown menu showing '1:30 PM'. Below these fields is a note: 'Set Max=0 to mark as full day off — Start/End time will be ignored.' At the bottom of the modal are three buttons: 'Delete' (red), 'Cancel' (grey), and 'Save' (green).

Editing a time-off entry.

3.5 Service Request tab

Service Request is the queue of service requests submitted by customers through the public **Customer Portal** (Chapter 4). Each request waits here for a manager to review and turn into a real appointment.

Finding requests

Use the **date range** (by submission date) and the **status** filter (Pending, Scheduled, Declined, or All) to narrow the list, then click **Refresh**. New requests are **Pending** and default to the last three months. Every row has a **View** button for a read-only summary; pending rows also show a **Review** button.

The screenshot shows the ServiceNet interface with the 'Service Schedule' tab selected. The 'Service Request' sub-tab is active. The interface includes a sidebar with navigation options like Dashboard, Service Accounts, Service Schedule, Service Ops, Assurance, Inventory, Service & Parts, Reports, Notification, and Configuration. The main area displays a table of service requests with columns: REQUEST NO, SUBMITTED, CUSTOMER, SERVICES, PREFERRED, and STATUS. A single request is shown with a 'Pending' status, and buttons for 'View' and 'Review' are visible.

REQUEST NO	SUBMITTED	CUSTOMER	SERVICES	PREFERRED	STATUS
REQ-2026-3	2026-06-01 13:46	Grace Stonegate Church	iPhone Charging Port Repair, iPhone Screen Replacement	2026-06-10 11:30	Pending

The Service Request tab.

Converting a request to an appointment

1. Click **Review** on a pending request.
2. The review window shows the customer's request details and a pre-filled appointment form: the matched **account** (read-only), a **location** to confirm, the requested **date and time**, a **technician** (limited to the account's site), and the requested **services** (which you can adjust).
3. Adjust anything that needs changing, then click **Convert** → **Appointment**.
4. ServiceNet creates a **Scheduled** appointment (with its services, estimate, and assigned technician) and marks the request **Scheduled**, stamped with the new appointment number. The request stays in the list as history.

Reviewing a request before converting it.

Declining a request

If a request can't be fulfilled, open **Review** and click **Decline**. Add an optional reason and confirm; the request is marked **Declined** and no appointment is created. Reviewing, converting, and declining are permission-controlled, so the buttons appear only for staff who are allowed to use them.

3.6 Appointment statuses

An appointment moves through these statuses as work progresses. The early stages are set in Schedule; later ones are driven by Service Ops and Assurance.

Status (code)	Meaning
Scheduled (SC)	Just created. Not yet confirmed; can still be freely edited or deleted.
Confirmed (CF)	Estimate confirmed and ready to dispatch. Editing is locked in the Assignment tab.
Dispatched (DP)	Sent to the technician; parts have been pulled from inventory.
In Progress (IP)	Technician has started the work.

Status (code)	Meaning
Pending Review (PR)	Work submitted for manager review; parts used vs. returned are reconciled here.
Finished (FN)	Work complete and moved to Assurance.
Assurance (AS)	Under quality review.
Completed (CP)	Signed off and ready for invoicing.
Reschedule Requested (RR)	A new date has been requested.
Rescheduled (RS)	Moved to a new date.
No Show (NS)	Customer was not available at the appointment.
Unable (UA)	Technician was unable to perform the service.
Cancelled (CN)	Appointment cancelled.

4. Customer Portal

The Customer Portal is a public, no-login web page where customers request service themselves. What they submit lands in the Schedule module's Service Request tab (Chapter 3) for a manager to review and convert into an appointment. This chapter describes what the customer sees; staff handle the requests from Service Request.

4.1 How a customer requests service

The portal walks the customer through four short steps:

1. **Your Info** — the customer enters their name, email, phone, and address. ServiceNet matches these against accounts on file; when at least two details match an existing account (for example last name plus phone), the request is linked to that account automatically.
2. **Service** — they pick one or more services from the list and can add a free-text note describing the problem.
3. **Date & Time** — a calendar shows only days with open capacity, based on technician schedules and time off. After choosing a day, they pick from the available time slots.
4. **Confirm** — they review a summary and submit. The page shows a reference number (for example REQ-2026-1) on success.

[Continue](#)

Customer Portal — Step 1, Your Info.

The screenshot shows the 'Service' step of the ServiceNet request process. At the top, a progress bar indicates four steps: 1. Your Info, 2. Service (current), 3. Date & Time, and 4. Confirm. The main heading is 'What do you need help with?' with a subtext 'Pick one or more services.' Below this is a grid of 16 service options, each with a checkbox and a label. The services are arranged in two columns and eight rows.

Service	Service
☐ Desktop CPU Thermal Service	☐ Desktop Power Supply Replacement
☐ Desktop SSD Installation	☐ iPad Battery Replacement
☐ iPad Screen Replacement	☐ iPhone Back Glass Replacement
☐ iPhone Battery Replacement	☐ iPhone Camera Repair
☐ iPhone Charging Port Repair	☐ iPhone Screen Replacement
☐ iPhone Water Damage Treatment	☐ Laptop Battery Replacement
☐ Laptop Fan Replacement	☐ Laptop Keyboard Replacement
☐ Laptop RAM Upgrade	☐ Laptop Screen Replacement

Customer Portal — Step 2, Service.

The screenshot shows the 'Date & Time' step of the ServiceNet request process. The progress bar at the top shows steps 1. Your Info, 2. Service, 3. Date & Time (current), and 4. Confirm. The main heading is 'Choose a date & time' with a subtext 'Available days are based on our team's schedule.' The interface is split into two main sections. On the left is a calendar for June 2026, with days of the week (Su, Mo, Tu, We, Th, Fr, Sa) and dates (1-30). The date '10' is highlighted in red. On the right is a list of 'AVAILABLE TIMES' from 9:00 AM to 1:00 PM in 30-minute increments. The time '11:00 AM' is highlighted in red. At the bottom right are 'Back' and 'Continue' buttons.

Customer Portal — Step 3, Date & Time.

The screenshot shows the ServiceNet Customer Portal interface. At the top, there's a dark header with the ServiceNet logo on the left and a 'Request Service' link on the right. Below the header, a progress bar indicates four steps: 1. Your Info, 2. Service, 3. Date & Time, and 4. Confirm. The current step is 'Review & submit', which includes the instruction 'Please confirm your request details.' Below this, a form displays the following information:

NAME	Grace
CONTACT	919-555-2526
ADDRESS	
SERVICE	Laptop Fan Replacement
PREFERRED	Wednesday, June 10, 2026 at 11:00 AM

At the bottom right of the form, there are two buttons: a light gray 'Back' button and a dark gray 'Submit Request' button.

Customer Portal — Step 4, Review & submit.

4.2 When an account can't be matched

If fewer than two details match an account on file, the portal can't safely link the request, so it asks the customer to call instead and shows the office phone number. This keeps unmatched or mistyped submissions out of the queue.

4.3 What happens next

A submitted request is saved as **Pending** with the customer's preferred date, time, and a suggested technician (the least-busy available tech for that day — a starting point the manager can change). From there it appears in the **Service Request** tab, where staff review it, adjust anything needed, and convert it into a scheduled appointment or decline it. The customer's preferred technician is shown to staff during review.

5. Service Ops Module

Service Ops manages the active life of a job: sending it to a technician, tracking progress, rescheduling, and wrapping up jobs that could not be completed. It has four tabs.

5.1 Dispatch tab

Lists confirmed appointments waiting to go out. Dispatching a job sends it to the technician and **automatically pulls the job's parts from inventory** (recorded as service-withdrawal transactions).

1. Select one or more confirmed appointments.
2. Click **Dispatch**. Each appointment moves to **Dispatched**, a service record is written, and the parts on the job are deducted from stock.
3. A notification is sent to the relevant staff for each dispatched appointment.

The Dispatch tab.

The screenshot shows the 'Service Order — 2026-3' form in the ServiceNet interface. The form is titled 'ServiceNet SERVICE ORDER' and includes a date and time stamp '2026-3 06/03/2026 7:00 AM - 8:30 AM'. It is divided into several sections: 'Service Information' and 'Service Site' at the top, followed by 'Account / Location' details, and an 'Items' table at the bottom. The 'Items' table lists two items: a 'Service' (Desktop Power Supply Replacement) and a 'Part' (ATX PSU 650W Gold). At the bottom of the form are buttons for '+ Add More Items', 'Edit Tech', 'Print', 'Reschedule', and 'Dispatch'.

Service Information		Service Site	
Appt No	2026-3	Site	Southeast Field Office
Date	06/03/2026	Address	620 Peachtree St NE, Atlanta, GA, 30308
Time	7:00 AM - 8:30 AM	Phone	(404) 555-0177
Technician(s)	Ryan Allen

Service	SV-0025 Desktop Power Supply Replacement	hr	1.5	
Part	PT-0088 ATX PSU 650W Gold	EA	1	X

The Service Order for a confirmed job.

5.2 Active tab

Shows dispatched and in-progress jobs. From here the technician (or office) advances the job through its working stages.

Action	What happens
Start (→ In Progress)	Marks that work has begun.
Submit for Review (→ Pending Review)	Sends the job to a manager; this is where parts actually used vs. returned are reconciled.
Finish (→ Finished)	Completes the work and moves the job to Assurance; sends a notification.
No Show / Unable	Records that the visit could not be completed. See the note below about parts.
Cancel Dispatch	Reverses a dispatch (returns the job to Confirmed) and returns the pulled parts to stock.

Parts returned automatically. When a dispatched or in-progress job is marked No Show or Unable, ServiceNet returns all of that job's parts to stock automatically (a positive service transaction plus a stock add-back). The same return happens when you Cancel Dispatch. You don't need to adjust inventory by hand for these cases.

Submitting for review (work items, parts, photos)

Choosing **Set Pending Review** opens a form where the technician records the outcome of the visit:

- **Work items** — a checklist for each service; tick completed items and type responses where requested. Required items are marked.
- **Return parts** — enter how many of each issued part are being returned to stock.
- **Photos** — add photos from the device; previously saved photos are shown as thumbnails. Hover a photo and click the **X** to remove it (newly added ones are simply dropped; saved ones are deleted after a confirmation). Deleting saved photos requires review permission.
- **Issue flag & notes** — flag a problem and add internal or customer-facing notes; notes are required when the issue flag is set.

Reviewing a Pending Review job

On each **Pending Review** card a manager has three buttons: **Service Items**, **Approve** → **Finished**, and **Reject** → **Back to IP**.

Service Items opens a read-only summary of what the technician recorded — the work-item checklist with responses, the parts, and the photos — so you can review the job before deciding. Nothing on this view can be changed. **Approve** moves the job to Finished (on to Assurance); **Reject** sends it back to In Progress for more work.

The Active tab, grouped by stage.

5.3 Reschedule tab

Lists appointments where a reschedule has been requested (**Reschedule Requested**). Open one, pick the new date and time, add a note, and confirm. The appointment moves to **Rescheduled** and the customer receives a reschedule email. Parts already pulled stay with the job for the new date.

5.4 Wrap Up tab

Handles appointments sitting in **No Show** or **Unable** that still need a decision. For each you can:

- **Reschedule** — move it to a new date (status becomes Rescheduled).
- **Cancel** — close the appointment (status becomes Cancelled) and notify the customer.

Note on inventory: Parts for No Show / Unable jobs are already returned to stock at the moment those statuses are set in the Active tab, so cancelling here changes only the status — it does not touch inventory again.

The screenshot shows the ServiceNet interface with the 'Service Ops' tab selected. The 'Wrap Up' sub-tab is active, displaying a table of appointments. The table has columns: APPT NO, DATE, STATUS, SITE, ACCOUNT, SERVICES, TECH(S), and REASON. A single record is shown with status 'Unable'. Below the table are 'View', 'Reschedule', and 'Cancel' buttons. The bottom of the screen shows the user 'Dennis Kaufman' and a pagination indicator '1 - 1 of 1'.

APPT NO	DATE	STATUS	SITE	ACCOUNT	SERVICES	TECH(S)	REASON

Marking an appointment for reschedule.

6. Finding Accounts: Search & the Activity Page

The search box at the top of every screen lets you jump straight to a customer's full history without opening a module. It's the fastest way to answer “what has happened at this account?”

6.1 The search box

Click the search box in the top bar and start typing — after two characters, a dropdown lists matching results as you type. You can search by **account** (name, phone, or email) or by **location** (name, street, city, or ZIP). Each result is tagged **Account** or **Location** so you can tell which matched.

Selecting any result opens that customer's **Activity** page. (Choosing a location still opens the account it belongs to.) The search text clears and the box collapses once you make a selection; press **Esc** to dismiss the dropdown without choosing.

The top-bar search dropdown.

6.2 The Activity page

Activity is a full-screen view of one account's entire service history. It opens over your current work; the top bar title changes to **Service Activity**. Click **Back** (or open any module tab) to return exactly where you were.

The Activity page for an account.

Header

The top of the page shows a **Street View image** of the primary location alongside the account details — site, phone, email, location, address, and on-site contact. If no street imagery is available for the address, the panel simply reads “Street view unavailable.”

Service history

Below the header is every appointment for the account, **most recent first**. Each row shows the appointment number, a status badge, date and time, location, services, technician, and the job total. The **View** button opens the printable Service Order for that job (the same document used elsewhere in ServiceNet).

Drilling into a job

Click any history row to expand it. The detail view shows three things for that appointment:

- **Process History** — a timeline of every status the job moved through (scheduled, dispatched, in progress, and so on), with the date, who made the change, and any notes or issue flags.
- **Service Report** — the work-item checklist for each service, showing which items were completed and the technician's recorded responses.
- **Photos** — any photos captured during the job; click one to open it full size.

7. Inventory Module

The Inventory module tracks parts across your sites. Every movement is recorded as a transaction so quantities always reconcile. Each tab corresponds to a kind of movement.

7.1 Tabs at a glance

Tab	Purpose
Stock	Master list of parts and on-hand quantities per site. Add and edit parts here; flag low-stock items.
Receive	Record parts coming in from a purchase order (stock increases).
Issue	Record parts issued out for non-job reasons (stock decreases).
Remnant	Track leftover/partial quantities.
Adjustment	Manually correct on-hand counts (cycle counts, corrections).
RMA	Return parts to a vendor (stock decreases, recorded as a vendor return).
Services	A read-only log of parts pulled or returned by service jobs (dispatch, returns).

7.2 Everyday tasks

Adding or editing a part (Stock tab)

1. On the **Stock** tab, click **Add** (or **Edit** on an existing row).
2. Fill in the part details and the site it belongs to.

The screenshot displays the ServiceNet Inventory module's 'Stock' tab. The interface features a sidebar with navigation options like Dashboard, Service Accounts, Service Schedule, Service Ops, Assurance, Inventory (selected), Service & Parts, Reports, Notification, and Configuration. The main content area shows a table of inventory items. The table has columns for PART NO, PART NAME, TYPE, UNIT, ON HAND, MIN, MAX, and LOCATION. The items listed are:

PART NO	PART NAME	TYPE	UNIT	ON HAND	MIN	MAX	LOCATION
PT-0181	128GB Samsung eMMC	C	Ea	-2	0	—	—
RM-0012	16GB DDR4 SO-DIMM (Remnant)	R	EA	-1	0	—	—
PT-0043	16GB DDR4 SO-DIMM 3200	P	EA	-2	0	—	—
PT-0045	16GB DDR5 SO-DIMM 4800	P	EA	0	0	—	—
PT-0041	1TB MacBook SSD Blade	P	EA	0	0	—	—
PT-0037	1TB NVMe SSD M.2	P	EA	0	0	—	—

Each row includes an 'Edit' button. The interface also includes a search bar, filters for 'All Types' and 'Headquarters', a 'Low Stock Only' checkbox, and a '+ Add Record' button. The bottom status bar shows '1 - 15 of 216'.

DK Dennis Kaufman ONLINE

1 – 2 of 2

The Receive tab.

Adjusting a count

On the **Adjustment** tab, enter the corrected quantity and a reason. Use this for cycle-count corrections rather than editing stock directly, so the change is captured as a transaction.

Returning to a vendor (RMA)

On the **RMA** tab, record parts being sent back to a vendor. This decreases stock and is logged as a vendor-return transaction.

7.3 The Services log

The **Services** tab is read-only — it shows every part movement caused by service jobs, filtered by site, search term, and date range (default: the last three months to today). Columns include date, part number and name, the appointment number, quantity, **Reason**, and notes.

You'll see	Meaning
Negative quantity (–)	Parts pulled out for a dispatched job. Reason shows “Dispatched.”
Positive quantity (+)	Parts returned to stock. Reason shows “Service Abandoned — Parts Returned” (No Show/Unable) or a cancellation/undispatch reason.

Reading the pair: A dispatched job that is later abandoned shows two rows for the same part and appointment — a –1 (Dispatched) and a +1 (returned) — so the net effect on stock is zero. This is the normal, expected pattern.

DATE	PART NO	PART NAME	APT NO	QTY	REASON	NOTES
06/01/2026	PT-0095	Flux Rosin Paste 10ml	Appt 2026-5	+1	Service Abandoned — Parts Returned

06/01/2026	RM-0012	16GB DDR4 SO-DIMM (Remnant)	Appt 2026-5	-1	Added at Dispatch	

The Services log.

7.4 Refresh and Excel

Every Inventory tab has a **Refresh** button (reloads the list with your current filters) and an **Excel** button (downloads the current filtered view as a spreadsheet). On the Services tab, the Excel download includes the Reason column shown on screen.

8. Notifications Module

ServiceNet sends notifications as jobs move through their lifecycle — for example when an appointment is confirmed, dispatched, finished, rescheduled, or cancelled. Notifications reach the right people two ways: in-app messages for staff, and emails for customers.

8.1 Inbox tab

Your in-app messages. Each row shows priority, type, the originating page, the message, the recipient, and the date/time. Unread items are highlighted with a dot.

- **Filter** by user, type, read/unread, and page using the toolbar drop-downs.
- **Read** — click Read on a row to mark it read, or Mark All Read to clear everything for the selected user.
- **Delete** — remove a notification from the inbox with the X button.
- **Refresh** — reloads the inbox and updates the unread badges shown on the menu and tabs.

8.2 Log tab

A delivery history across both channels — in-app and customer email/SMS. Use it to confirm something went out or to investigate a failure.

- **Filter** by type, channel (In-App / Email / SMS), status (Pending / Sent / Failed), and a date range.
- **Status badges** show where each item stands; a failed item shows its error underneath.
- **Retry** — for a failed customer notification, click Retry to queue it again for sending.
- **Refresh** — reloads the log with your current filters.

TYPE	CHANNEL	PAGE	MESSAGE	RECIPIENT	STATUS	DATE / TIME
Appointment Rescheduled	INAPP	ServiceOps / Reschedule	Appt 2026-3 — Appointment Rescheduled	Hyun Kim	PENDING	2026-06-01 14:18:09

Appointment Confirmed	EMAIL	Schedule / Assign	Appt 2026-3 — Appointment Confirmed	Cleanwater Pool Services	PENDING	2026-06-01 13:48:08

The Notification Log tab.

8.3 Notification Types and recipients

Administrators define notification types (the events that generate messages), each with a channel, template, priority, and the originating page/tab. Each type is mapped to the roles that should receive it, so the right staff are notified automatically. Customer-facing types (such as Confirmed, Cancelled, Rescheduled, and Completed) also queue an email to the customer.

8.4 Preferences

On the Preferences tab you can turn individual notification types on or off for yourself. If you have never set a preference for a type, you receive it by default; turning a type **off** stops future in-app messages of that type for your account without affecting anyone else.

9. Configuration Module

The Configuration module is the system-administration hub, available only to users with the right permissions. It has five tabs — Sites, Roles, Permissions, Pages, and Users — that together define the locations, access control, page structure, and user accounts the rest of ServiceNet relies on.

9.1 Sites tab

Sites are the physical or logical locations (headquarters, regional office, warehouse) used throughout ServiceNet to assign users and technicians. The grid lists each site's code, name, type, location, contact, sort order, and status.

Click **Add Site** to create one; the modal is grouped into **Basic Info** (**Site Name** and **Site Code** are required, plus type, sort order, status, and description), **Contact** (names, phones, email, website), and **Address** (street, city, state, ZIP, timezone). Click the site name or **Edit** on any row to change it. Deleting a site (from the Edit modal) is permanent and also removes every user-site assignment linked to it — confirm no users or technicians are assigned first.

CODE	SITE NAME	TYPE	LOCATION	CONTACT	SORT	STATUS	
HQ	Headquarters	Headquarters	Raleigh, NC	Hyun Kim	1	Active	Edit
EAST	East Regional Office	Office	New York, NY	Laura Dunphy	2	Active	Edit
WEST	West Regional Office	Office	Los Angeles, CA	Cathy Lance	3	Active	Edit
WH1	Central Warehouse	Warehouse	Dallas, TX	Aaron Briggs	4	Active	Edit
SE	Southeast Field Office	Field	Atlanta, GA	Devon Okafor	5	Active	Edit
MID	Midwest Office	Office	Chicago, IL	Rhyné Timberlake	6	Active	Edit
NW	Northwest Field Office	Field	Seattle, WA	Jordan Whitfield	7	Active	Edit
WH2	South Warehouse	Warehouse	Houston, TX	Esme Vega	8	Active	Edit
RSB	Remote Support Hub	Remote		Chynna Stapleton	9	Active	Edit
TRN	Training Center	Office	Durham, NC	Marcus Avila	10	Inactive	Edit

Configuration — Sites.

9.2 Roles tab

Roles drive access control via the Permissions tab. The grid shows role name, description, sort order, and status. Click **+ Add Role** to create one (name, description, sort, and Active/Inactive status), or the role name / **Edit Role** to change it. Deleting a role permanently removes it **and all of its permission assignments**, immediately revoking those permissions for any user assigned to that role.

9.3 Permissions tab

Permissions is the primary access-control screen: it controls which pages, tabs, and actions each role can use. A role list sits on the left (with a search box); selecting a role loads its page/tab/action tree on the right with On/Off toggles.

Permissions are structured in three levels, each with its own toggle:

Level	What it controls
Page	Whether the role can see and access the page at all.
Tab	Whether the role can open a specific tab within a page.
Action	Whether the role can perform a specific action in a tab (Add, Save, Delete, and so on).

Expand a page with its chevron and a tab with its expand button to reach the actions. Changed items are highlighted in amber. Use **Select All** / **Clear All** to grant or revoke everything for the role at once. When anything changes, **Review & Save** activates and shows a summary of what moved On or Off; **Confirm & Save** applies it, **Discard** reverts. Saving requires the Permissions ReviewSave permission — others can view but not modify.

Configuration — Permissions.

9.4 Pages tab

The Pages tab is the registry of every page, tab, and action in the system — the structure the Permissions editor draws from. It is intended for system administrators only; incorrect changes can break page access for everyone.

The grid is hierarchical (Page → Tab → Action). **Add Tab** on a page row sets the tab's internal **name** (used in code), its display **label**, and sort order. **Add Action** on a tab row sets the internal **action name** used in permission checks (for example Schedule.Assign.AddAppointment), a human-readable label, and an optional server method. Click any tab or action name to edit or delete it; deleting a tab also removes all of its actions.

This is the same registry the rest of the system reads when wiring up a new tab or action — for example, the **Service Request** tab in Schedule and its review/convert/decline actions are registered here.

9.5 Users tab

The Users tab manages user accounts — creating them, editing profiles, assigning roles and sites, uploading photos, resetting passwords, and deleting accounts. A user search sits on the left (by first/last name, username, or email); selecting a result loads the full profile in the editor.

Adding and editing users

1. Click **+ Add User** and fill in the dialog — **First Name**, **Last Name**, **Email**, and **Username** are required; phone, an MFA toggle, primary role, primary site, and status are optional.
2. Click **Register**. The user appears in search immediately.
3. To edit, select the user and change any section — **Basic Information**, **Profile Photo** (JPEG/PNG, if permitted), **Roles** (toggleable chips, multiple allowed), and **Sites** (toggleable chips). Any change activates **Review & Save**; confirm to apply or **Discard** to revert.

Resetting a password

With a user loaded, click **Reset Password** and confirm. ServiceNet generates a secure reset link valid for 15 minutes, emails it to the user's registered address, and sets a flag requiring them to set a new password at next login. A result dialog reports **Success** (email sent) or **Warning** (email couldn't be delivered — the flag is still set). If the user has no email on file, the reset can't be sent, so set a valid email first.

Deleting a user

Click **Delete** in the user editor and confirm. This permanently removes the account and all of its role and site assignments; it cannot be undone.

Configuration — Users.

9.6 Permissions reference

Permission / Action	What it controls
Configuration.Sites.AddSite	Add Site button.
Configuration.Sites.EditSite	Edit Site / Update button.
Configuration.Roles.AddRole	Add Role button.
Configuration.Roles.EditRole	Edit Role button and clickable role name.
Configuration.Permissions.ReviewSave	Review & Save and Discard on the Permissions tab.
Configuration.Users.AddUser	Add User button.
Configuration.Users.ReviewSave	Review & Save and Discard on the Users tab.
Configuration.Users.DeleteUser	Delete button in the user editor.
Configuration.Users.ResetPassword	Reset Password button in the user editor.
Configuration.Users.UploadPhoto	Photo upload in the user editor.

10. Reports Module

The Reports module brings together read-only reports from across ServiceNet. It has one tab per area — **Schedule**, **Service Ops**, **Inventory**, **Assurance**, **Service & Parts**, **Notification**, **Reference Data**, and **Audit** — and apart from Audit, every tab works the same way, so once you've run one report you know how to run them all.

10.1 How every report tab works

Each tab is split into a list of available reports on the left and a working area on the right.

1. **Pick a report** from the list on the left. Its title and a one-line description appear at the top of the working area.
2. **Set the filters** shown for that report. Most reports offer a date range and a site; some add their own filter (a technician, a type, or a status). Reports that simply list reference data have no filters at all.
3. Click **Run**. The results fill the table, and a totals row at the bottom sums the numeric columns.
4. Click **Excel** to download exactly what you see, with the filters you applied, as a spreadsheet file.

Permissions. As elsewhere in ServiceNet, your role controls what you can see. Reports you don't have access to simply don't appear in the list, and the Excel button is hidden if you can't export. If a tab shows “No reports available,” your role hasn't been granted any reports on that tab — ask your administrator.

The screenshot displays the ServiceNet interface. On the left is a dark sidebar with navigation links: Dashboard, Service Accounts, Service Schedule, Service Ops, Assurance, Inventory, Service & Parts, Reports (selected), Notification, and Configuration. The main area has a top navigation bar with tabs: Dashboard, Reports (selected), and a close button. Below this is a sub-tab bar with: Schedule, ServiceOps, Assurance, Inventory, Service Parts, Notification, and Reference Data. The 'Schedule' sub-tab is active, showing a list of reports on the left: REPAIRS, Appointment Summary, Technician Productivity, Technician Utilization (highlighted), Service Request Funnel, and Sales by Period. The right side of the screen shows the 'Technician Utilization' report. It includes a title, a description 'Booked jobs vs. available capacity per technician over the period.', and filter fields for FROM (06/01/2026), TO (06/30/2026), SITE (All sites), and TECHNICIAN (All technicians). There are 'Run' and 'Excel' buttons. Below the filters is a table with 28 rows. The table has columns: TECHNICIAN, CAPACITY, BOOKED, and UTILIZATION %. The data shows utilization for various technicians, with a total row at the bottom.

TECHNICIAN	CAPACITY	BOOKED	UTILIZATION %
Amanda Clark	132	0	0
Amber Baker	132	0	0
Andrew King	132	0	0
Ashley Williams	132	0	0
Brian Anderson	129	0	0
Brittany Phillips	132	0	0
Chris Lewis	132	0	0
Daniel Harris	132	0	0
Daniel Brown	132	0	0
TOTAL	3,659	7	

Reports — Technician Utilization.

10.2 Schedule reports

Reports about appointments, technician workload, customer requests, and sales.

- **Appointment Summary** — appointment counts by status for the period.
- **Technician Productivity** — jobs, service hours, and revenue per technician.
- **Technician Utilization** — booked jobs against available capacity, with a utilization percentage per technician.
- **Service Request Funnel** — customer requests by status, with each status's share of the total.
- **Sales by Period** — sale net, tax, and total grouped by month.

10.3 Service Ops reports

Reports about the active life of jobs in the field.

- **Jobs by Stage** — appointment counts by current status.
- **Exceptions Summary** — counts of no-show, unable, cancelled, and reschedule outcomes.
- **Issue Flags** — flagged service items per primary technician.

10.4 Inventory reports

Reports about stock levels and parts movement.

- **Stock on Hand** — quantity, min/max, and a low-stock flag per part. Filter by part type, or show low-stock items only.
- **Inventory Ledger** — transaction count, total quantity, and value by transaction type.
- **Parts Usage by Job** — parts consumed on jobs (issued to appointments), by part.

10.5 Assurance reports

Reports about quality review and sign-off.

- **Assurance Pipeline** — jobs at each QA stage (Finished, Assurance, Completed).
- **Sign-off Throughput** — jobs signed off to Completed per month, with revenue.
- **Flagged Issues** — finished or in-assurance jobs carrying an issue flag, by technician.

10.6 Service & Parts reports

Reports about the service catalog and parts.

- **Service Catalog** — services with type, hours, price, and how many parts each one uses.
- **Service BOM** — the parts required for each service, with quantity and line cost.

- **Most-Used Services** — services ranked by how often they're sold, with quantity and revenue.
- **Parts Catalog** — all parts with type, unit, and price.

10.7 Notification reports

Reports about notifications sent to staff and customers.

- **Notifications by Type** — volume by notification type, channel, and priority.
- **Delivery Status** — customer send outcomes (sent, pending, failed) by channel.
- **Read Rate** — in-app notifications delivered versus read, with a read rate per type.
- **Failed Deliveries** — a detailed list of customer notifications that failed to send, with the error.

10.8 Reference Data reports

Listings of the system's base data — useful for review and audits. These reports have no filters; just pick one and click Run.

- **Pages** — application pages with area, sort order, and tab count.
- **Roles** — security roles with description and assigned user count.
- **Permissions** — every tab action by area and tab, with how many roles grant it.
- **Sites** — operating sites with type, location, and status.
- **Users** — system users with contact details, status, and role count.
- **Accounts** — customer accounts with type, status, and location count.
- **Account Locations** — service locations per account, with contact and route.

10.9 Audit

The Audit tab is the one report tab that doesn't use the left-hand report list. Instead it shows a single, searchable log of every database action ServiceNet has recorded — who did what, when, and from where. It's intended for administrators reviewing activity or tracing a change.

Each row lists the time, the area, class, and method of the action, the user who performed it, and the originating IP address. Because a single action can involve a long SQL statement, the detail is kept out of the grid: click **Detail** on any row to open a window showing the full statement and its parameters.

Narrow the log with the **Area** filter, the date range (which defaults to the last seven days), and the search box, which matches on the method, class, or the SQL itself. Results are paged fifty at a time, with page controls at the foot of the table. **Refresh** reloads the current view, and **Excel** exports the filtered log — full SQL and parameters included — as a spreadsheet.

Two permissions govern the tab: **Report.Audit.View** controls access to the tab itself, and **Report.Audit.Export** controls the Excel button. As with the other report tabs, if your role grants neither, the tab won't appear.

Reports — the Audit log.

11. Assurance Module

Assurance is the quality-review stage that follows Service Ops. When a job is marked **Finished**, it moves here for a final check before it is signed off as **Completed** and made ready for invoicing. The module opens on the **Assurance** tab, with **Review**, **Issues**, and **Resolution** tabs alongside it.

11.1 Assurance tab

This tab lists the jobs waiting for sign-off, filtered by site. Each row shows the appointment number, date, time, site, account and location, services, technician(s), and amount, along with **View**, **Approve**, and **Cancel** buttons.

APPT NO	DATE	TIME	SITE	ACCOUNT / LOCATION	SERVICES	TECH(S)	AMOUNT	
2026-2	06/03/2026	6:45 AM	Headquarters	Atlas Property Management East Branch	Desktop CPU Thermal Service	J. Mitchell	\$148.97	View Approve Cancel

The Assurance tab.

View opens the job's Service Order so you can check the work and the pricing before you decide.

11.2 Issues tab

The Issues tab collects finished jobs that a technician flagged with a problem during the visit, filtered by site. Each row shows the appointment number, date, time, site, account and location, services, technician(s), and amount.

APPT NO	DATE	TIME	SITE	ACCOUNT / LOCATION	SERVICES	TECH(S)	AMOUNT	
2026-10	06/03/2026	8:00 AM	Headquarters	Atlas Property Management East Branch	iPad Screen Replacement, iPhone Back Glass Replacement	N.Taylor	\$590.93	View Elevate Reschedule Request
2026-9 ▲ In Progress	06/16/2026	8:00 AM	West Regional Office	Cascade Mechanical Main Office	iPhone Back Glass Replacement	E.Chen	\$445.93	View Sign Off

The Issues tab — a flagged job elevated to In Progress.

Three actions sit on each row. **View** opens the job's Service Order so you can check the work. **Reschedule Request** raises a request to revisit the job, and **Sign Off** completes it once the problem has been handled.

When a flagged job needs more than a quick fix, **Elevate** turns it into a tracked issue the team can work over time. Pick a priority — Normal, High, or Critical — and, optionally, an assignee, then add a short description (the technician's flag note is filled in for you). The issue then appears in the **Resolution** tab.

Once a job has been elevated, a colored status pill — for example “▲ In Progress” — appears beneath its appointment number and the **Reschedule Request** button is hidden, because the issue is now managed in Resolution. Click the pill at any time to view the issue's full history without leaving the Issues tab.

11.3 Resolution tab

Resolution is where elevated issues are tracked from open through to closed. Filter the list by site, by status, and by a date range that defaults to the last three months. Each row shows the issue's priority, appointment number, account and location, site, assignee, the date it was opened, and its current status; the most urgent issues sort to the top.

The Resolution tab.

View opens the issue. The panel shows the job's context, the original description, any recorded resolution, and a complete history of everything that has happened to the issue. If you have permission to manage issues, you can change the status, set the priority, assign an owner, and add a note or resolution — every change is written to the history.

An issue moves through four statuses — **Open**, **In Progress**, **Resolved**, and **Closed** — and a resolved or closed issue can be reopened when work needs to continue. One rule applies: once the underlying appointment has been signed off (Completed), its issue can no longer be reopened.

11.4 Review tab

Review shows jobs that have already been reviewed, so you can look back over completed sign-offs.

12. Service & Parts Module

Service & Parts is the catalog behind every job: the services you offer, the checklist items that make up each service, the parts those services use, the promotional discounts you run, and the vendors you buy from. This is separate from the **Inventory** module — Inventory tracks on-hand quantities, while Service & Parts defines the catalog itself. It has five tabs.

12.1 Services tab

The list of services a customer can be booked for. Columns show the service number, name, type (for example Maintenance, Replacement, or Installation), description, standard hours, price, cost, and how many parts are attached. Use **+ Add Service** or **Edit** to maintain them.

SERVICE NO	SERVICE NAME	TYPE	DESCRIPTION	HOURS	PRICE	COST	PARTS

SV-0002	iPhone Battery	Replacement	Swap depleted iPhone battery and calibrate charg...	0.5	\$79.99	\$18.00	1 part

Service & Parts — the Services catalog.

12.2 Service Items tab

Service items are the work-item checklist building blocks that make up a service. Each item has a number, a type, a name and description, an **input** type (Text or Checkbox), whether it is **required**, a sort order, hours, and an active flag. These are what a technician completes when submitting a job for review.

Service & Parts — Service Items.

ITEM NO	TYPE	ITEM NAME	INPUT	REQUIRED	SORT	HOURS	ACTIVE
SI-CN-01	Consultation	Customer requirements noted Record customer requirements and goals for this consultation.	Text	Yes	10	0.10	Active

SI-CN-08	Consultation	Follow-up action items List any follow-up actions required after consultation.	Text	No	80	0.05	Active

12.3 Parts tab

The parts catalog. Columns show the part number, name, model number, specification, type (Part, Consumable, or Remnant — with BOM parts marked), unit, price, and cost. Search by name or number, filter by type, or tick **BOM only**. **+ Add Part** or **Edit** opens the part editor.

Service & Parts — the Parts catalog.

PART NO	PART NAME	MODEL NO	SPECIFICATION	TYPE	UNIT	PRICE	COST

Editing a part.

12.4 Promotion tab

Promotions are discounts you can apply to jobs. Each one has a code, name, description, an active date range, a discount unit (\$ or %), what it applies to (All or Service Only), and a status. **+ Add Promotion** or **Edit** opens the editor.

PROMO NO	NAME	DESCRIPTION	FROM	TO	UNIT	APPLIES TO	STATUS	
WINTERRDY	Winter Ready Package	Flat dollar off winter prep service calls	10/01/2026 12:00 AM	12/15/2026 11:59 PM	\$ Dollar	Service Only	Active	Edit

Service & Parts — Promotions.

In the editor you set the promotion number, status, name, description, the from/to dates, the discount unit and value, and what the discount applies to.

Editing a promotion.

Your suppliers. Columns show the vendor number, name, type (Supplier, Manufacturer, Distributor, or Service Provider), contact, email, and status. Use **+ Add Vendor** or **Edit** to maintain them.

Service & Parts — Vendors.

13. Financial Module

The Financial module is the accounts-receivable side of ServiceNet. Once a job has been signed off as Completed in Assurance, it is ready to be invoiced and collected here. Every movement of money is recorded against the account as a transaction, and each transaction is stamped with an automatically generated document number in the form yyyy-NNNNNN (for example, 2026-000001), so balances always reconcile and any entry can be traced. The module has five tabs: **Ready to Post**, **Received**, **Receivable**, **Ledger**, and **Adjustments**.

13.1 Ready to Post tab

Ready to Post lists completed, invoiced jobs that have not yet been posted to the ledger. Each card shows the sale number and site, the account, the appointment and its date, the service address, and the sale total, with a **Post** button. Filter by site and use **Refresh** to reload.

Clicking **Post** opens a window listing the job's line items (services and parts) with a **Sum of Sales**, an optional **Credit** you can apply, and the resulting **Net to Post**. Confirm with **Post** to record the charge; the job then leaves this list and appears in the Ledger.

Financial — the Ready to Post tab.

Posting a completed job.

13.2 Received tab

Received lists posted invoices that still carry an outstanding balance. Each card shows the sale, account, and appointment, the amount posted and the amount paid so far, and the balance due, with a **Receive** button. Filter by site, search by account, sale, or appointment, and export the list with **Excel**.

Clicking **Receive** opens a payment dialog showing the **Balance Due**. Enter the **Amount** (it defaults to the full balance), choose the **Method** (Cash, Check, Money Order, Credit Card, ACH / Bank Transfer, or Other), and optionally record a **Check / Ref No** and the **Payment Date**. Save with **Receive**. When a payment clears the balance, the invoice is marked paid and drops off the list.

Financial — the Received tab.

 A screenshot of a modal window titled 'Receive — 2026-13'. It contains the following fields:

- Pinnacle Pest Control** (Account Name)
- Appt 2026-12 · 06/18/2026** (Appointment Date)
- Balance Due** field with the value **\$18.97**
- AMOUNT** field with the value **18.97**
- METHOD** dropdown menu set to **Cash**
- CHECK / REF NO** field (empty)
- PAYMENT DATE** field set to **06/05/2026**
- Cancel** and **Receive** buttons at the bottom right.

Receiving a payment.

13.3 Receivable tab

Receivable is an aging summary of what each account owes. Every row shows the account, its phone, and the balance broken into **Current**, **31–60**, **61–90**, and **90+** day buckets, with a **Balance** column and a totals row at the foot of the table; amounts in the 90+ bucket are highlighted. By default only accounts with a non-zero balance are listed — tick **All accounts** to include settled ones as well. Filter by site, search by account, reload with **Refresh**, and export with **Excel**.

Aging is measured from each transaction's date rather than by applying payments to the oldest charges first, so it is a straightforward view of how old a balance is.

Balance Transfer. When an account carries a balance, its row shows a **Transfer** button for moving that balance to another account — useful when a charge was billed to the wrong account or when

two accounts are being consolidated. Clicking it opens a dialog showing the source account and its current balance. Search for and select the destination account, enter the **Amount** (it defaults to the full balance), and provide a **Memo**, which is required so the reason is always on record. Confirming the transfer posts two linked transactions — a credit that reduces the source account's balance and a matching debit that raises the destination account's — each with its own document number. Both appear in the Ledger as the **Balance Transfer** type.

Account	Phone	Current	31-60	61-90	90+	Balance
Pinnacle Pest Control	(919) 555-3940	\$18.97	\$0.00	\$0.00	\$0.00	\$18.97
Total		\$18.97	\$0.00	\$0.00	\$0.00	\$18.97

Financial — the Receivable aging summary.

13.4 Ledger tab

The Ledger is the complete record of every financial transaction. Its columns show the date — with the transaction's document number shown just beneath it — along with the account, sale, type, method, debits, credits, reference number, and memo. Narrow the view by site, by date range (which defaults to roughly the last three months), by transaction type (Invoice / Charge, Payment, Credit Memo, Adjustment, Write-off, Refund, Void, or Balance Transfer), or by searching across account, sale, memo, and reference. Results are paged fifty at a time, with page controls beneath the table. **Refresh** reloads the list and **Excel** exports it.

Where your role allows it, a **Void** button reverses a transaction; a voided entry is excluded from all balances.

Financial — the Ledger tab.

13.5 Adjustments tab

Adjustments records manual changes to an account's balance that are neither a normal charge nor a payment — credit memos, write-offs, refunds, and general corrections. The tab lists adjustments with their date (with the document number shown beneath it), account, sale, type, debits, credits, and memo. Use the date range to choose the period — it defaults to roughly the last three months — and the results are paged fifty at a time, with page controls beneath the table.

Click **+ New Adjustment** to open the dialog. Search for and select the **Account**, choose the **Type** (Credit Memo, Write-off, Adjustment, or Refund), enter the **Amount**, optionally tie it to a **Sale No** (leave blank for an account-level adjustment), and add a **Memo** explaining the reason. A line beneath the form states how the entry will affect the balance — for example, a credit memo reduces the account balance. Click **Create** to post it.

Financial.Adjustments.Create	The + New Adjustment button on the Adjustments tab.

14. Quick Answers

Question	Answer
A button I expect is missing.	It's almost always a permission. Your role controls which actions appear; ask your administrator if you need access.
My list looks out of date.	Click Refresh. The list shows a snapshot from when it loaded; Refresh re-runs it with your current filters and picks up others' changes.
The Set Appointment button is gone.	Reopen the Add Appointment dialog — it resets the form. This was a known issue and has been corrected.
I cancelled a dispatched job — are the parts back?	Yes. No Show, Unable, and Cancel Dispatch all return the job's parts to stock automatically. Check the Inventory → Services tab to see the matching positive transaction.
Did the customer get the email?	Open Notifications → Log, filter by channel = Email and the date, and check the status. Use Retry on any Failed row.
I'm getting too many alerts.	Open Notifications → Preferences and switch off the types you don't want.
I need this list in Excel.	Click the Excel button on the tab; it exports exactly what your filters currently show.
Where do I find reports?	Open the Reports module. It has a tab per area (Schedule, Service Ops, Inventory, Assurance, Service & Parts, Notification, Reference Data); pick a report from the left, set the filters, and click Run — then Excel to download it.
How do I see everything about one customer?	Use the top-bar search, pick the account or location, and the Activity page shows their full history, process timeline, service reports, and photos.
I'm reviewing a job — how do I see what the tech did?	On the Pending Review card, click Service Items for a read-only view of the checklist responses, parts, and photos before you approve or reject.
A photo won't delete.	Deleting saved photos needs review permission. If the ✕ doesn't remove it, your role may not allow it.
